

CONNECTING YOUR HOME TO THE FIBRE NETWORK

BANKSIA GROVE

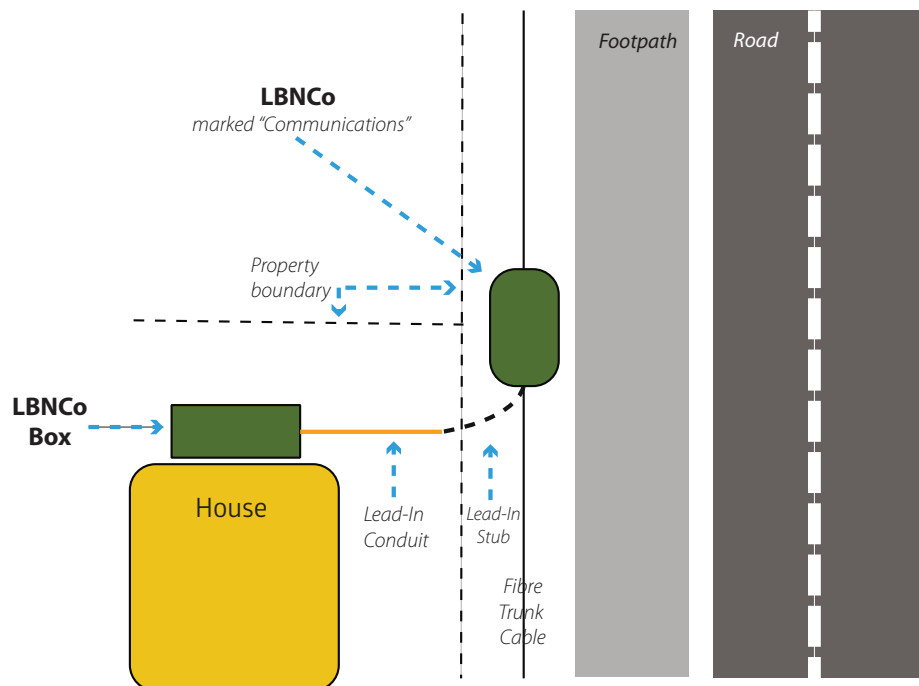

This illustration shows how your home connects to the Fibre Network via a Lead-in Conduit. The Lead-In Conduit runs from the LBNC Co 'pit' that is located near the boundary of your property to the side of your house (typically, next to the electrical meter box). It is the responsibility of the homeowner to provide a Lead-In Conduit, connected to the lead-in stub from the communications pit, in order to connect telecommunication services to your home. In most cases, your builder will install and connect the Lead-In Conduit as part of your home package.

Connecting to the Lead-In Conduit

When LBNC Co install the communications pit, a short section of the lead-in 'stub' is installed, which extends just inside your property, approximately 800mm from the dividing boundary. On an undeveloped lot, you might see this stub protruding from the ground. The lead-in conduit must be connected to, and run from this 'stub' to the side of your house adjacent to the meter box.

Wired for a better future

At Banksia Grove, we are committed to providing the latest 'true fibre' technology to ensure high speed internet and telephone access to our residents. The Banksia Grove network only uses fibre cables so there are no copper wires to slow down internet speeds. Once your home is complete, you can choose from the panel of telecommunication service providers which currently include the following retailers:
